Company Profile

Telesource AG has been recognized and respected as a leader in the planning, realisation and maintenance of communication systems in Switzerland since more than two decades. Based in Burgdorf and Kleindöttingen, Switzerland, Telesource designs, realises and provides services for public and private organisations all over the country and has a growing export rate in Europe.

Core competences

- Professional training, planning and realisation of communications systems
- Use of high-quality, high-tech products
- After-sales service and training
- Qualitative, financial and temporal reliability in all our projects

Product Range

The customer- and user-specific development of communication solutions is our core business. We realise overall turn-key solutions as well as development of existing systems. Our product range includes product lines of international well-known system houses that allow us to satisfy the user in a cost-efficient and optimal way. We represent the following companies:

- Radio-systems
- VHF-systems
- Broadcast Equipment
- Video/Audio/Data Equipment
- Point to Multipoint systems
- Satellite-communication
- GPS Equipment
- Fiber Optics
- LAN-Networks

Customers

- Broadcast companies
- Network Provider
- Public and private telephony companies
- Power supply companies
- Power stations
- Army
- Railways
- Security and safety services
- Hotels, Congress halls
- System Houses
- Tourist Offices

We serve the customers complete communication needs, from small projects to multi-million dollar installations. Our products reflect innovative solutions to the clients problem, keeping cost-effectiveness in mind.

DCL – our favorite

DCL Opportunities

The DCL transmitting distances can be enlarged by using repeaters. Additional Transceivers lead to a highly mobile communication structure which you can build up in a few minutes. So you are totally independent of any other infrastructure.

By using our special full-duplex DCL system you can realise video communication plus two-way audio communication in areas like tunnels and underground infrastructure where normal radios do not work any more. This is a milestone in communication possibilities for the front officer.

Using the very robust and sensitive diversity receiving system you are able to enlarge even more the flexibility and mobility of the DCL. All these opportunities are like modules. So you can actually chose what kind of communication structure is the best for your situation.

Be it:

- Border Control by cars, or airplanes
- Survey of catastrophic situations
- Survey of demonstrations
- Survey of battlefields
- Firefighter Communications
- Police Force communications and many more

"A video tells more than thousand words!"
